Professional Summary

- Overall 12+ years of experience in the IT industry as a Software Test Engineer and data analyst.
- I have 9+ years of experience in DB&ETL with Python Testing
- Having around 3 years of Manual Testing and Having 6 years of experience as QA Lead
- Experienced in Software testing methodologies such as the **Waterfall model and Agile Methodology, V-Model.**
- Good knowledge of **Software Development Engineering (SDLC).**
- Good knowledge of **Software Testing Life Cycle (STLC)** - Test Plan, Test Design, Test Execution, Defect Tracking, Bug reporting, and Regression/Retesting.
- Knowledge of mapping the test cases with the requirements using a traceability matrix for Identifying Test Coverage
- To load the data from different sources using **Python Dag's/Airflows**
- Hands-on experience with mappings from various transformation logics like **Router, Filter, Aggregator, Joiner**, Update Strategy, and reusable transformations.
- Experience in MYSQL and worked with databases like **SQL Server2018, Teradata, Snowflake and AWS S3 bucket.**
- Experience writing complicated SQL statements and PL/SQL code to test data flow and perform data analysis.
- Experienced in Smoke Testing, System Integration Testing, Functional Testing, and Regression testing.
- Experienced in writing test cases based on requirements, executing test cases, and Rising and Retesting Defects in **HP ALM (HP Quality Center), TFS, QTest, and Jira.**
- Efficient in finding bugs and hands-on experience with the **bug life cycle.**
- Quickly able to analyze defects and report them effectively.
- Expertise in executing test cases and generation of test reports.
- Quick Learner having the ability to meet tight deadlines and work under pressure.

Experience Summary

- Working as a QL Lead for Sonata Software from Feb-2025 to Till date.
- Worked as QA Lead for **EncoraHyd**, from November-2022 to Feb-2025
- Worked as Sr. Software Engineer(QA Lead) for **Capgemini Hyd**, from June 2021 to Nov 2022
- I worked as Sr. Software Engineer for **BKIS Hyd**, from Jan-2017 to June 2021
- Worked as ETL Tester for **3I-Infotech CSL Hyd**, From Jan-2016 to 16-Dec-2016
- Worked as a Software Test Engineer for **Anna IT Services Pvt Ltd Hyd**, From Dec-2012 to Dec-2015

Technical Skills:

Operating Systems	: Windows 7.
Testing	: ETL Testing, Manual Testing, DB Testing, ETL Testing, Data Warehouse testing, Snowflake Testing, AWS S3 bucket, PostgreSQL, BI Reports Testing
Database	: SQLServer, Oracle 10g, Teradata (12&13), MySQL,
DWH Tools	: Informatica 9.0, Data Warehouse, Data stage 8.0.1, Snowflake Testing
Tools	: HP ALM (Quality-Center), TFS, Jira, QTEST, Quality Center
Domains	: Banking and Insurance & Healthcare

Education Details:

- M.C.A from 2007-2010 from J.N.T University (Kakinada) with 72.5%

Project Details:-

Project#1: NZ-DLZ Snowflake Replatforming program

Client: TRUIST BANK

Environment: Snowflake, SQL Server 2018, TOAD, WinScp, Putty, AWS S3, Bucket, Python Scripts, HP ALM

Time Size: 10

Description : The NZ-DLZ Snowflake Replatforming program is responsible for executing Truist's transition from a fully on-prem to a hybrid cloud data delivery operating model featuring a new data movement framework and integration with Truist's Snowflake Data Cloud.

In the program target-state, source application data will be extracted on-premises via a combination of Talend and AbInitio. As part of the data movement and data integration process, data which is slated for persistence off-premises is transmitted to Snowflake where it is integrated into the relevant cloud-based data system elements. The corresponding data pipelines that previously utilized this data are reestablished, including connections back to on-premises systems as required. It is understood that all source-like and enriched application data hosted on Snowflake shall follow the same ingestion and curation standards as exist on-premises.

Responsibilities:

- Working is as QA Lead and handling ten members.
- Understanding and analyzing the given Source to Target/ Technical Specifications.
- Involved in analyzing user requirements and creating complex scenarios as a part of testing.
- Working with different file formats like XML, JSON, delimited, text-based files as data sources or targets
- Effective coordination between the development and testing teams.
- Validation of Data in various tables.
- Developed high-level test scenarios & Test cases.

- Validation of the data in the target cloud database (Snowflake).
- Involved in review meetings and responsible for daily and weekly status reports.

PROJECT #2:-340BDirectplus _832 Drug Price Revamp

Client :Zions Bank Corporation, US

Environment :Snowflake, Kafka, QTest, SQL Server2018, AWS S3, Bucket, Cleo tool, Python Scripts

Team Size :7

Description: 832 EDI price files are loaded by the Cleo tool from the aws s3 bucket to the DMB main server on average loading 6000 files daily (both Full and Delta files). This uses a considerable amount of resources on the DB main server and sometimes leads deadlock situations when full files to the database.

To reduce the load on the DB main server, the proposal is to move the load and processing of EDI 832 files to anew standalone server and create a delta file process on the DB main. The delta file will contain only the updates and newly received records

- Working as QA Lead and handling 7 members.
- Understanding and analyzing the givenSource to Target/ Technical Specifications.
- Involved in analyzing user requirements and creating complex scenarios for testing.
- Effective coordination between the development and testing teams.
- To load the data from different sources using Python airflow
- Validation of Data in various tables.
- Validation of the data in the database works AWS cloud and cloud-based services like AWS S3
- Build test scripts based on mapping and other technical specifications documents
- Developed high-level test scenarios & Test cases.
- Experience with issue tracking and IT productivity tools like JIRA, and Confluence for maintaining the document and defects
- Involved in review meetings and responsible for daily and weekly status reports.

PROJECT #3:-Caesars Entertainment Corporation (Caesars)

Client :Caesars Inc, US

Environment :PostgreSQL, HVR, QTest, SQL Server2018, Teradata13, AWS S3 Bucket, Snowflake .

Team Size :12

Description: Caesars Entertainment Corporation is an American casino and hotel Company. The service to Caesars Entertainment is achieved through Infogenesis POS. Agilysys provide innovative point-of-sale for casino resorts, hotels, restaurants and food services. POS solutions include options for fixed, mobile and tablet devices that can be deployed in the cloud or on-premise. Data loading, migrating is incorporated through Snowflake Technology, AWS. Bank transactions(Fund Transfer) is made with more security.

Responsibilities:

- Working is as QA Lead and handling nine members.
- Understanding and analyzing the given Source to Target/ Technical Specifications.
- Involved in analyzing user requirements and creating complex scenarios as a part of testing.
- Effective coordination between the development and testing teams.
- Validation of Data in various tables.
- Developed high-level test scenarios & Test cases.
- Validation of the data in the database (Snowflake).
- working with different file formats like XML, JSON, delimited, text-based files as data sources or targets
- Involved in review meetings and responsible for daily and weekly status reports.

Project Details:-

Project 4 & Client : TPM(Title Point Maintenance), Bank of America	
Environment	:Data Warehousing, Informatica Power Center 10.1.1/9.6, Bi Reports Testing
Domain	:Finance & Property Domain
Duration	: Jan- 2017 to June-2021
Role	: Sr.Software Engineer

Project Description:

Data Management in the Finance domain of one of the largest Insurers in BOA (U.S) with the DATA WAREHOUSE testing. The testing effort is to ensure that the data transformation and flow from IBM iSeries Source Systems to Dashboards and BI Reports are as per requirements. In order to achieve this below test approach will be followed:

- Validate business transformations are applied correctly before loading the data from landing to staging and target tables.
- Expire and insert logic is applied correctly.

Roles & Responsibilities:

- Understand the customer requirements, and sources and evaluate them.
- Prepared and ran SQL queries to verify Dimensional and Fact tables.
- Verifying the data in the target database by ETL process
- Verified column mapping between source and target
- Validate business transformations are applied correctly before loading the data from landing to staging and to target tables.
- Interactions with BA & Dev teams to resolve the issues.
- Extensively involved in writing SQL queries for verifying Table Columns, Data types, Field Sizes, Duplicates, Nulls, and Counting of Data, etc
- Validation of data in BOE reports and Dashboard.

- Test Execution – system testing, integration testing, and End to end-to-end testing and Regression testing.
- Test Execution and Defect Logging in HP ALM.

PROJECT 5:- Synchrony Financial (Synchrony Bank)

Client :Synchrony Inc, US

Environment : Informatica9.0, Teradata13, Oracle10g

Team Size : 9

Duration : Jan-2016 to Dec 2016

Project Description:

Synchrony Bank is revamping its current online account origination solution. Several Fiserv products would be used to provide for the online account origination solution including Aperio, Signature, Communicator Advantage, etc, They need a centralized Data warehouse for the purpose of maintaining History to make the decisions.:

Role & Responsibilities:

- Designed SQL queries based on Transformation Rules while preparing test cases.
- Execute the SQL scripts to validate if data is loaded as per requirements
- Executing the Test cases and documenting the Test Results.
- Extensively involved in writing SQL queries for verifying Table Columns,Data types, Field Sizes, Duplicates, Nulls, and Counting of Data, etc.
- Verifying the stored procedure based on the requirements
- Effective coordination between the development and testing team
- Responsible for Daily and Weekly Status Reports.

Project Name#6: IMS (Insurance Management System)

Client : MWW Inc, California.

Environment :C#.Net ASP.Net and Sqlserver2008, JavaScript, JQuery

Testing : Agile Methodology – Scrum

Databases : SQL Server, Oracle

Tools :HP QC (Quality Center).

Role :Software Test Engineer

Project: This Project typically consists of business validation of auto, commercial property and mortgage modules. The main objective of this project is to customize the business of auto, commercial property, and mortgage into to single system to access the customers at a time. In this project for business auto creating Auto policies and auto coverage as well as in mortgage and commercial property also, insurance coverage for all the small and medium businesses mainly in terms of the creating polices as business validation.

Role & Responsibilities:

- Understand the given Customer Requirements.
- Involved in the analysis of Business and Functional Requirement Specification documents.
- Raised queries for clarifications on the Specification doc within in query tracker tool.
- Understanding the logical flow of the Business Application.
- Creating Test Scenarios and test Cases based on Functional Requirement Specification documents.
- Involve Reviews as a team member and update the test cases for the review log.
- Uploading the test cases from MSExcel to the Quality center.
- Executing the test cases and raising the defects in the defect tab.
- Executing the Test cases and documenting the Test Results.
- Find defects when test execution is under process and log defects with the help of HP QC.
- Perform Retest and Regression Test when the defects are fixed.
- Involved in review meetings and responsible for daily and weekly status reports.
- Completing the execution within the due dates and within the given estimation
